

INFLUENZA IN MANITOBA – 2010/2011 SEASON

Cases reported up to May 7, 2011

The public health disease surveillance system of Manitoba Health received its first laboratory-confirmed positive case of influenza for the 2010/2011 season (running from July 1, 2010 to June 30, 2011) during Week 39, September 26 – October 2, 2010. This season there have been **474** laboratory-confirmed cases of Influenza A and **11** lab-confirmed cases of Influenza B in the province.

LABORATORY-CONFIRMED INFLUENZA

- Reports from Cadham Provincial Laboratory (CPL) are forwarded to the public health disease surveillance system of Manitoba Health weekly.
- The number of positive cultures is an underestimate of the total number of cases, since not all persons with influenza seek medical attention, and of those that do, not all are cultured for the virus.
- Information contained within this update is based on positive lab reports confirmed on or before May 7, 2011. The date the laboratory specimen is taken is used to assign cases to the appropriate week/month.

INFLUENZA A

- There have been **474 cases of Influenza A** reported this season in Manitoba.
- Refer to **Table 1** for a summary of cases by Regional Health Authority (RHA) and week of specimen collection and **Table 3** for a summary of cases by age group.
- Refer to **Figure 1** for an illustration of the number of laboratory-confirmed cases of Influenza A by month in Manitoba, 2003/2004-2010/2011.

INFLUENZA B

- There has been **11 cases of Influenza B** reported this season in Manitoba.
- Refer to **Table 2** for a summary of cases by Regional Health Authority (RHA) and week of specimen collection and **Table 3** for a summary of cases by age group.
- Refer to **Figure 2** for an illustration of the number of laboratory-confirmed cases of Influenza B by month in Manitoba, 2003/2004-2010/2011.

REPORTS OF INFLUENZA-LIKE ILLNESS OUTBREAKS

- ILI outbreaks are defined as:
Schools: Greater than 10% absenteeism (or absenteeism that is higher (e.g. >5-10%) than expected level as determined by school or public health authority) which is likely due to ILI.
Hospitals and Residential institutions: two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case.
Other settings: two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case; i.e. workplace, closed communities.
- These outbreaks of influenza must be accompanied by a positive influenza lab report to be counted. The outbreak-related cases reflected on tables and figures within this report are lab-confirmed. Most outbreak-related cases are not lab-confirmed.

As of May 7, 2011, there were **36** regional outbreaks of lab-confirmed Influenza A and no lab-confirmed outbreaks of Influenza B reported to the public health disease surveillance system for the 2010-2011 season:

| RHA: | LTCF* | Workplace | Acute Care Facility | Community |
|-------------|-------|-----------|---------------------|-----------|
| Winnipeg | 21 | 1 | 1 | |
| Brandon | 2 | | | |
| Interlake | 2 | | | |
| Central | 2 | | 1 | |
| Assiniboine | 4 | | | |
| Parkland | 1 | | | |
| Burntwood | | | | 1 |

* LTCF = long term care facility

NATIONAL FLUWATCH PROGRAM

Manitoba Health participates in the National FluWatch Program coordinated by the Public Health Agency of Canada and the College of Family Physicians of Canada. In addition to laboratory-confirmation of influenza, this program relies on weekly reports of influenza-like illness (ILI) as reported by 23 current Manitoban sentinel physicians. These sentinels reflect cases found in eight regional health authorities.

- Manitoba Health receives weekly reports from the Public Health Agency of Canada presenting the provincial ILI rate and the specific data for each of the participating sentinel physicians. Not all sentinel physicians participate in the program each week, and 10 of the 23 sentinels participate in swabbing for influenza with their ILI patients.
- For the 2010/2011 season, ILI in the general population is defined as: *Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which is likely due to influenza. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.*
- Refer to **Figure 3** for an illustration of the ILI rate and number of reporting sentinels as it relates to the number of laboratory-confirmed cases of influenza.

SUB-TYPING, STRAIN CHARACTERIZATION, AND ANTIVIRAL RESISTANCE

- **Sub-Typing:** The following summarizes the breakdown of influenza by type and sub-type, as reported by CPL:

| A/H1N1 | A/H3N2 | A unsubtype | A Total |
|--------|--------|-------------|----------------|
| 1 | 57 | 416 | 474 |

- **Strain Characterization:** Since September 1st, 2010, National Microbiology Laboratory (NML) reports that it has antigenically characterized **10** influenza viruses that were received from CPL. Nine Influenza A/H3N2 viruses characterized were antigenically related to A/Perth/16/2009-like, and one Influenza B virus was antigenically related to B/Brisbane/60/2008-like.
- **Antiviral Resistance:** Since September 1st, 2010, NML has tested for antiviral resistance on Manitoba isolates with the following results:

| | Influenza A/H3N2 | | Influenza B | |
|-------------|------------------|-----------|-------------|-----------|
| | Resistant | Sensitive | Resistant | Sensitive |
| Amantadine | 16 | 0 | 0 | 0 |
| Oseltamivir | 0 | 8 | 0 | 1 |
| Zanamivir | 0 | 8 | 0 | 1 |

INFLUENZA-RELATED HOSPITALIZATIONS, ICU ADMISSIONS, AND DEATHS

- Lab-confirmed report of influenza infection is required for a hospitalization, ICU admission, or death to be counted.
- Influenza-related death should be interpreted with caution as underlying cause of death may or may not be directly related to the lab-confirmed positive influenza diagnosis.
- Reporting on hospitalizations, ICU admissions, and deaths has now ended for the 2010/2011 influenza season. The following table presents the total number of severe outcomes reported this season.

| | Cumulative Total |
|-------------------|------------------|
| Hospitalizations: | 98 |
| ICU Admissions: | 17 |
| Deaths: | 6 |

HEALTH LINKS – INFO SANTÉ (HL-IS)

- HL-IS is a 24-hour, 7-days a week telephone information service staffed by registered nurses with the knowledge to provide answers over the phone to health care questions and guidance to appropriate care.
- From May 1-7, 2011, there were a total of **22 calls** made to HL-IS Influenza Service. Of these calls:

| | |
|-----------|--|
| 2 | caller(s) selected to hear the <i>Flu Appointment</i> option |
| 0 | caller(s) selected the <i>Influenza Program</i> |
| 19 | caller(s) selected <i>Flu Management</i> |
| 1 | caller(s) selected the <i>Free Flu Shot Program</i> |

- See **Figure 4** for an illustration of the number of calls as it relates to the number of lab-confirmed cases of influenza.
